

What is your **Fixation Choice** in Total Hip Replacement?

Whatever your preferred fixation option is, DePuy Synthes can provide a solution supported by strong results in the NJR.

The NJR has produced new reports analyzing the performance of three DePuy Synthes Constructs, specifically:

- A report detailing 123,536 **CORAIL® PINNACLE®** Uncemented implantations (mean age 65.7, 44.4% male).¹
- A report detailing 9,899 **C-STEM™ AMT PINNACLE®** Hybrid implantations (mean age 70.3, 37.3% male).²
- A report detailing 8,234 **C-STEM AMT MARATHON™** Cemented implantations (mean age 74.6, 33.3% male).³

This analysis was commissioned by DePuy Synthes, but conducted and validated by the NJR. All Metal-on-Metal were excluded. All reports can be accessed at <http://www.corailpinnacle.net/supporting-evidence/overview>.

Key Messages:

- Patients receiving a **CORAIL PINNACLE** Cementless Construct are 17% less likely to be revised when compared to all other uncemented stems on the NJR (HR 0.83 (0.79, 0.87) p<0.001).¹
- The C-STEM PINNACLE Hybrid Construct shows no difference in risk of revision when compared to the comparative class (all other Hybrid Hips).²
- The C-STEM MARATHON Cemented Construct shows no difference in risk of revision when compared to the comparative class (all other Cemented Hips).³
